The field ecologist has played a key role in shining the light on the species we love and admire. They have also underlined why conservation should not be just about caring for a few charismatic species-the cats, elephants, whales, or Olive Ridleys. It's also about knowing the value of creatures many of us might consider annoying, even dangerous. For millennia, communities have attempted to protect animals and plants for practical and spiritual reasons. However, for around two centuries or so, an anthropocentric view of the world created an ecological discord of sorts. Utilitarian ideas began to dominate attitudes towards nature, which often meant that even conservation had a strictly commercial purpose.

Modern environmental consciousness is perhaps about six decades old. In India, organisations such as the Bombay Natural History Society date back to the late 19th century and the endeavors of hunters-turned-conservationists played an important role in underlining the value of several species. But systematic efforts in mainstreaming ecology began much later and owed much to the works of pioneers like Salim Ali and M Krishnan.

निम्नलिखित गद्यांश को पढ़िये और उससे संबंधित प्रश्नों के उत्तर दीजिए:

हम जिन प्रजातियों से प्रेम करते हैं तथा हम जिनकी प्रशंसा करते हैं, क्षेत्र पारिस्थितिकी विज्ञानियों ने उन पर प्रकाश डालने में महत्वपूर्ण भूमिका निभाई है। उन्होंने यह भी रेखांकित किया है कि कुछ करिश्माई प्रजातियों – बिल्लियों, हाथियों, व्हेल या ऑलिव रिडले, की देखभाल मात्र ही संरक्षण नहीं होना चाहिए। यह उन जीवों की महत्ता को जानने के बारे में भी है जिन्हें हममें से अनेकों लोग क्षोभकारक, यहाँ तक कि खतरनाक भी मानते हैं।

सहस्राब्दियों से, समुदायों ने व्यवहारिक एवं आध्यात्मिक कारणों से पशुओं एवं पादपों के संरक्षण का प्रयास किया है। इसके बावजूद, लगभग दो शताब्दियों या उसके आसपास विश्व के मानव – केन्द्रित दृष्टिकोण ने एक प्रकार का पारिस्थितिकीय मतभेद उत्पन्न किया। उपयोगितावादी विचारों ने प्रकृति के प्रति प्रभुत्वकारी अभिवृत्तियों की शुरुआत की, जिसका प्रायः आशय यह था कि संरक्षण का भी एक सही अर्थों में व्यावसायिक प्रयोजन था।

आधुनिक पर्यावरणीय चेतना संभवतः लगभग छह दशक पुरानी है। भारत में, बाम्बे प्राकृतिक इतिहास सोसायटी जैसे संगठन 19वीं सदी के अंतिम वर्षों में आरंभ हुए थे और शिकारियों से संरक्षणवादियों में परिणत हुए व्यक्तियों के प्रयत्नों ने अनेकों प्रजातियों की महत्ता को रेखांकित करने में महत्वपूर्ण भूमिका निभाई थी। किन्तु पारिस्थितिकी – विज्ञान को मुख्य धारा में लाने का प्रयास बहुत बाद में प्रारंभ हुआ और इसके लिए सलीम अली एवं एम कृष्णनन जैसे पुरोधाओं के प्रयासों को इसका श्रेय अधिक जाता है।

A Community based study of respiratory illness during the first year of life was performed in Central India. The following table represents the data according to the socio-economic status, the number of children, and the number of children who developed the symptoms of respiratory illness.

Socio-economic status	Low	Medium	High
Number of children	50	100	100
Number of children with illness	10	10	5

This data was collected through the face to face interview involving team of pediatricians and social scientists. The community belonged to the rural area in Central India (State of Chhattisgarh) in which there were 1500 households. A total of 100 households were selected with fifty each from left and right to the main lane of the community. To facilitate the process of interview, interviewers collected information through a validated questionnaire in local language which was pilot tested in the community. Based on the above information answer the following questions.

Traditional ecological knowledge is a body of knowledge and a framework to distinguish between its empirical kinds and ways of life; between information and ways of knowing. It is considered at several levels of analysis and consistent as knowledge-practice-belief complex. It begins at level of taxonomic systems and then proceeds to understanding of processes or functions. It follows 'paradigmatic knowledge' or interpretation of empirical observation to put them in a context, and then knowledge embedded in social institutions, the rules and norms of society, and finally the regional worldview or belief system. In practice these analyses are concentric but not always distinct. The social institutions and management systems are often closely coupled that may seem artificial. One may argue that these are one and the same that may adapt, change or fall apart or renewed. Worldview and social institutions but may themselves be affected by changes occurring at other scales.

Traditional ecological knowledge is a body of knowledge and a framework to distinguish between its empirical kinds and ways of life; between information and ways of knowing. It is considered at several levels of analysis and consistent as knowledge-practice-belief complex. It begins at level of taxonomic systems and then proceeds to understanding of processes or functions. It follows 'paradigmatic knowledge' or interpretation of empirical observation to put them in a context, and then knowledge embedded in social institutions, the rules and norms of society, and finally the regional worldview or belief system. In practice these analyses are concentric but not always distinct. The social institutions and management systems are often closely coupled that may seem artificial. One may argue that these are one and the same that may adapt, change or fall apart or renewed. Worldview and social institutions but may themselves be affected by changes occurring at other scales.
